FAQ

- Can I still use my existing template?
Yes, the dispatcher supports any custom template.
- Can I send this tool to my dispatcher?
Yes, there is no sensitive information on the dispatcher and it may be shared with a non event host dispatcher.
- How do I add a world to the auto fill list?
The world list is stored [here](#), you can open a pull request with new worlds and they'll be added.
- How do I suggest a feature or report an issue?
You can send me a message on discord.

General Use

Dispatch Log Generator

A screenshot of a web form titled "Dispatch Log Generator". The form is dark-themed with light gray labels and input fields. It contains five sections: "Squad", "Requested", "World", "Safety", and "Situation". Each section has a corresponding input field. The "Situation" field is larger than the others. At the bottom of the form is a blue button labeled "Copy Log To Clipboard" with a clipboard icon.

This is where you input the data for you call,
The first four sections have some common prefilled options.

Squad and Requested share a **list of all squads**.

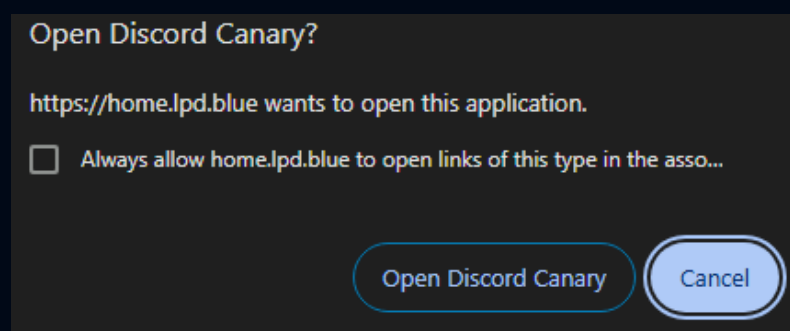

World has some **common worlds**.

Safety has **Safe**, **Unsafe** and **Unknown**.

You are **not required** to choose from these and may **type anything** in the fields.

You can **tab** between sections and use **arrow keys** to select between prefilled options.

Once done you can click on or hit **enter** when tabbed over the copy button, this will copy the log into clipboard using your template then bring you to the dispatch channel to paste it.

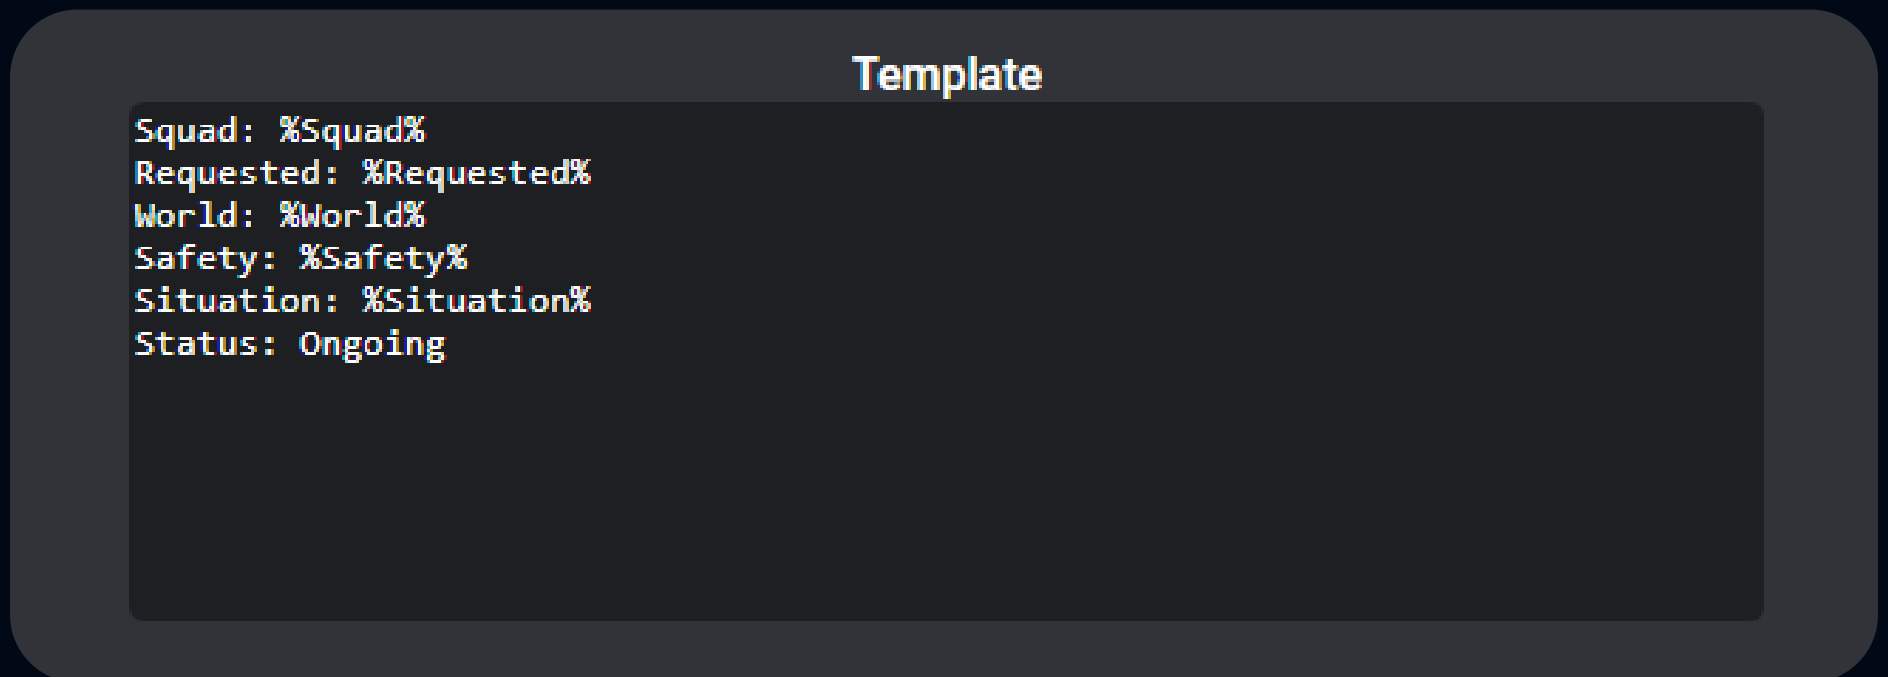

It's recommended that you click "**Always allow**",

So you don't have to always click the open button when you copy a log.

Template

To set a template, use the **blue circle button** in the bottom right corner.

Here you can put you custom template just like you'd type it in discord.

After each section such as Squad you put **%Squad%**,

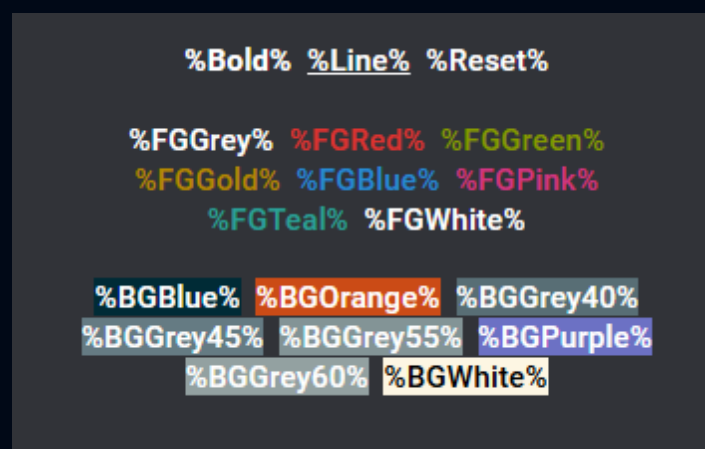

This is the part that will be replaced by the dispatcher when you copy a log.

Once you're down editing your template you can click **save** then close.

ANSI Color

For dispatchers who use ANSI Color in their logs the dispatcher will provide

short form codes for ease of use in the dispatcher.

You can use these codes in **any of the fields** while writing a log if you are using

ANSI code blocks. To use a ANSI code block start the template with **``ansi**

and end the message with **``** you may need to **refresh the page** for this.

Advanced

The dispatcher supports some more advanced features for templates such as

Time

`%numyear%` Current year in number format.

`%nummonth%` Current month in number format.

`%numdate%` Current year in number format.

`%stxtmonth%` Current month in short text format.

`%stxtday%` Current day in short text format.

`%ltxmonth%` Current month in long text format.

`%ltxday%` Current day in short text format.

`%hour%` Current hour in 24 hour format.

`%hour12%` Current hour in 24 hour format.

`%min%` Current minute.

`%campm%` Displays AM or PM.

`%ampm%` Displays am or pm.

Count

`%Count%` Displays the amount of logs you've made with the dispatcher.

Conditional Logic

You can use Conditional Logic to change things in the dispatcher based on the values of certain inputs.

E.G if you want safety to be red if it's Unsafe you can use,

`{%}Safety{:}Unsafe{=}%FGRed%` before `%Safety%` to set the color red.

Remember to use `%Reset%` at the end of the line so the color doesn't effect the new line. All together this is `{%}Safety{:}Unsafe{=}%FGRed%{%}%Reset%`
